Education

Woxsen University , Hyderabad, India	2022 – 2026
B.Tech in Computer Science and Engineering – CGPA: 8.2/10	
Krishna Public School	2019 – 2022
12th Grade, CBSE – 77% 10th Grade, CBSE – 91%	

Skills

Languages: Python, C++ (STL, Low-Latency)
AI-ML: PyTorch, Hugging Face, RAG, Time Series Analysis
Back-End: FastAPI, REST APIs, Multi-threading
Data: PostgreSQL, MongoDB
Infrastructure and Full Stack: Docker, Kubernetes, Git, Vite, React 18

Experience

Quantitative Analyst + Backend Engineer , GoQuant Technologies	Oct 2025 – Dec 2025
Remote	Full-time
- Built and backtested a BTC/ETH trading bot using tick data resampled to 1s OHLC, achieving 4.62% return (\$256 PnL) on \$5,500 NAV over 10 months of tick data. - Produced \$2.01M USDT volume with realistic fee modeling (\$619 in fees); identified and documented limit-order execution bugs affecting cancellations and price accuracy.	
Software Development Engineer Intern , GYTWorkz	Jul 2025 – Sep 2025
Onsite	Full-time
- Built an end-to-end LLM-based backend analytics pipeline for ingesting Excel-based KPI data (23 KPIs × 12 months); solution was presented directly to ACMA and Tata AutoComp (TACO). - Automated the data processing architecture within this pipeline, systematically reducing KPI reporting runtime from 1–2 hours down to under 27 seconds.	
Research Intern , AI Research Centre, Woxsen University	Feb 2024 – Jul 2024
Onsite	Part-time
- Led EEG emotion classification modeling on the DEAP dataset, achieving 86.9% accuracy and outperforming untuned XGBoost, SVM, GBM, and KNN baselines. - Co-authored the paper “<i>XGBoost-based Emotion Classification in Healthcare Using Electroencephalogram Signals</i>”, accepted at IEEE CAI 2025 (Santa Clara, CA).	

Projects

Quant-NLP Research Suite: Systematic Signal Research and Testing with XAI	Jan 2026 – Mar 2026
- Developed a full-stack platform (FastAPI/React 18) automating the research lifecycle from Transformer training/benchmarking to backtesting sentiment-gated strategies. - Designed an interactive interface for live and custom headline stress-testing using Triple-Method XAI (Integrated Gradients, Occlusion, Grad × Input). - Integrated RAG-based “Market GPT” grounded in backtesting results and an automated reporting engine to synthesize backtest artifacts into professional-grade financial PDF summaries.	
HFT-Lite: Real-Time Market Data Validation Engine	Apr 2026 – May 2026
- Built a low-latency real-time market data validation engine in C++20 using lock-free SPSC queues, atomics, cache-aligned data structures, and multithreaded streaming architecture. - Designed a live OHLCV ingestion and validation pipeline with asynchronous WebSocket processing, real-time anomaly detection, and ingestion-to-validation latency tracking for stale ticks, timestamp gaps, and invalid market data.
